

TKCloudStack Repository

This is the root of my cloud career and consulting journey. The structure below mirrors the phases outlined in my [TKCloudStack Roadmap](#), and is designed to support my transition into a cloud engineering role, independent consulting, and digital product creation.

Directory Layout & Purpose

/archive/

Used for older or alternate versions of strategic plans, notes, and one-off ideas. This keeps my active folders clean while preserving useful artifacts.

/assets/

Reusable non-code resources:

- [diagrams/](#): Visual architecture diagrams and system overviews
- [resume/](#): Different versions of my resume
- [templates/](#): Markdown or IaC templates used in project or client setups

/brand/

Contains the materials that define my outward professional identity:

- Career summaries
- LinkedIn profile drafts
- GitHub README planning
- Website layout/design notes

/notes/

All planning, reflection, and ideation lives here:

- [study-plan.md](#): My active certification and learning schedule
- [certifications.md](#): Progress tracker and lessons from certs
- [business-ideas.md](#): Freelance offers, SaaS ideas, market problems
- [weekly-reflections.md](#): Weekly logs of what I built, learned, or improved

/projects/

Real cloud engineering projects, aligned with my roadmap:

- Each folder represents a self-contained build with:
 - [README.md](#)
 - Architecture diagram
 - Terraform or Lambda code
 - Lessons learned

/roadmap/

Core strategic planning documents:

- [TKCloudStack_Complete_Roadmap_v1.md](#) → My comprehensive career + business execution plan
 - [.pdf](#) version for offline reading
 - [milestones.md](#): Major wins, project completions, and certifications
 - [version_history/](#): Track roadmap evolution
-

Why This Exists

This repository is my single source of truth for:

- Tracking my journey from military IT to cloud engineer and beyond
 - Documenting skills, projects, and repeatable systems
 - Building both a career portfolio and a service-based business under my brand, **TKCloudStack**
-

Future Expansion

This structure will scale to include:

- Public blog content or knowledge base
- Reusable modules (published via GitHub Releases or Gumroad)
- Client onboarding templates and packaged offers
